QUICKLEAD

Customer App & B2B Portal - UX/UI Brief

Design Brief | Information Architecture, Screens, Journeys and Visual Direction

1. Design Objective

Create a fast, premium and simple automotive service experience. The customer should be able to understand the condition of each vehicle, book service in a few steps, follow the job without calling the branch, approve additional work and access invoices/rewards. The B2B portal should prioritize fleet visibility, approvals and financial control.

2. Design Principles

- Fast: the most common actions should require minimal taps.
- Vehicle-first: organize the experience around the customer's cars, not internal workshop terminology.
- Transparent: show status, price, recommendations and approvals clearly.
- Trustworthy: use real photos, clear service descriptions, invoice visibility and approval history.
- Bilingual: Arabic-first quality with full English support and correct RTL/LTR layouts.
- Consistent: one design system across mobile app and B2B portal.

3. Recommended B2C Navigation

Suggested bottom navigation: Home | My Garage | Book | Rewards | Account

- Home: next service, active booking/RO, quick booking, offers and reminders.
- My Garage: all vehicles, vehicle health, mileage, service history, recommendations and documents.
- Book: select vehicle, service, branch, slot, extras and confirmation.
- Rewards: points balance, tier, available rewards, coupons and referral.
- Account: profile, saved information, notifications, language, support and settings.

4. Core Mobile Screens

# / Screen	Purpose	Key Content
01 - Splash / Onboarding	Brand promise, language selection, concise value proposition.	Primary CTA must be visually dominant.
02 - Login / OTP	Mobile number, OTP, terms and consent.	Primary CTA must be visually dominant.
03 - Home	Active job card, upcoming service, quick actions, offers, points.	Primary CTA must be visually dominant.
04 - My Garage	Vehicle cards with image, plate/model, mileage, next service.	Primary CTA must be visually dominant.
05 - Vehicle Details	Health summary, service history,	Primary CTA must be visually

	recommendations, invoices, warranty.	dominant.
06 - Book Service - Vehicle	Choose one of the saved vehicles or add a vehicle.	Primary CTA must be visually dominant.
07 - Book Service - Services	Oil, periodic maintenance, battery and other eligible quick services.	Primary CTA must be visually dominant.
08 - Branch Selection	Nearby/available branches, distance, hours and earliest slot.	Primary CTA must be visually dominant.
09 - Date & Time	Capacity-based appointment slots with clear availability.	Primary CTA must be visually dominant.
10 - Booking Summary	Vehicle, services, branch, time, estimated price and confirmation.	Primary CTA must be visually dominant.
11 - Active Service / Tracker	Timeline: check-in, RO open, in service, approval, ready, closed.	Primary CTA must be visually dominant.
12 - Additional Work Approval	Issue, recommendation, photo, price, approve/reject.	Primary CTA must be visually dominant.
13 - Payment	Amount, payment method, status and receipt.	Primary CTA must be visually dominant.
14 - Invoice	Tax invoice view/download and service details.	Primary CTA must be visually dominant.
15 - Rewards	Points, tier progress, rewards, coupons and referral.	Primary CTA must be visually dominant.
16 - Notifications	Booking, service status, approvals, reminders and offers.	Primary CTA must be visually dominant.
17 - Support / Feedback	Call/chat options, branch contact, rating and complaint/feedback.	Primary CTA must be visually dominant.

5. Main Customer Journeys

1. New customer: Onboarding -> OTP -> Add Vehicle -> Home -> Book Service.
2. Returning customer: Home -> Vehicle -> Book -> Branch -> Slot -> Confirm.
3. Active repair: Push notification -> Service Tracker -> View status -> Ready notification -> Payment/Invoice.
4. Additional work: Push notification -> Estimate -> Photo/details -> Approve/Reject -> Updated service tracker.
5. Retention: Service reminder -> Vehicle details -> Recommended service -> Booking -> Reward earned.

6. Vehicle Card / My Garage Concept

Each vehicle card should immediately answer: Which car is this? What is its current service status? What should I do next? Recommended elements: vehicle image/illustration, make/model/year, plate, mileage, last service, next service, open recommendation and a clear Book Service CTA.

Optional future concept: Vehicle Health Score (e.g., 87/100), supported by transparent factors rather than a unexplained score.

7. Service Tracker Concept

Use a visual timeline rather than internal RO codes:

- Appointment Confirmed
- Vehicle Checked In

- Repair Order Opened
- Service in Progress
- Waiting for Your Approval (when applicable)
- Final Check
- Vehicle Ready
- Completed

8. B2B Portal Information Architecture

Suggested left navigation: Dashboard | Vehicles | Work Orders | Approvals | Invoices | Statements | Reports | Users & Settings

- Dashboard: KPIs, vehicles currently in workshop, pending approvals, overdue items and spend trend.
- Vehicles: searchable fleet table with vehicle profile and complete maintenance history.
- Work Orders: open/closed ROs, status, branch, dates and cost.
- Approvals: prioritized queue with amount, vehicle, requested work, SLA/age and decision controls.
- Invoices & Statements: filters, status, due date, PO reference, download/export.
- Reports: spend by vehicle/branch/service, downtime, frequency and exceptions.
- Users & Settings: roles, approval limits, cost centers and notification rules.

9. Visual Direction

- Modern automotive look: clean surfaces, strong typography, generous spacing and high-contrast CTAs.
- Use Quicklead brand colors as the base; create a documented color, typography, icon and component system.
- Photography/illustration should focus on vehicles, technicians, quick service and trust - avoid generic corporate stock imagery.
- Status colors/icons must remain accessible and never rely on color alone.
- Cards should surface the next action rather than overload users with technical data.
- Design mobile screens first, then responsive B2B desktop/tablet layouts.

10. Components to Design

- Buttons, inputs, OTP, search, filters, dropdowns and date/time selectors.
- Vehicle cards, service cards, branch cards and offer/reward cards.
- Status chips, progress timeline, alerts and notification cards.
- Price/estimate component with VAT and total.
- Approval component with photos, comments and approve/reject actions.
- Tables, pagination, KPI cards, charts and export controls for B2B.
- Empty states, loading states, errors, offline/retry and success confirmations.

11. Required Design Deliverables

- User flows for B2C and B2B.
- Information architecture / sitemap.
- Low-fidelity wireframes.
- High-fidelity Arabic and English screens.
- Clickable prototype for booking, active service, approval and B2B approval flows.

- Responsive B2B portal designs.
- Design system and reusable component library.
- Developer handoff with states, spacing, assets and interaction notes.

12. Priority Prototype Scope

For the first design review, prototype these four journeys end-to-end: (1) login and add vehicle, (2) book a periodic service, (3) follow an active service and approve additional work, (4) B2B fleet manager reviews and approves a work request.
